

TASK-3

Business Analysis Report

Overview

This project analysed sales performance using SQL, Excel, and Power BI. The objective was to identify business trends, evaluate profitability, and create an interactive dashboard for decision-making.

SQL Analysis

Advanced SQL queries were used to analyse monthly sales, growth rates, order categories, and regional performance.

Key Findings

- Highest monthly sales: November (350,161.71)
- Lowest monthly sales: February (59,371.12)
- Highest growth: March (232.78%)
- Largest decline: February (-37.03%)
- Lowest profit region: South (77,317)

Excel Variance Analysis

Excel formulas were used to calculate monthly sales variance and growth percentages.

Observations

- Strong sales growth was observed in March, September, and November.
- Sales declined in February, April, and October.
- The results matched the SQL analysis and helped compare month-to-month performance.

Power BI Dashboard

An interactive dashboard was created to monitor business performance.

KPI Results

- Total Sales: 2.26 Million
- Total Profit: 442.22 Thousand

- Profit Margin: 19.55%
- Growth Rate: 3.81%
- Total Customers: 793

Insights

- The Consumer segment contributed the highest sales.
- The West region generated the highest profit.
- The South region showed the lowest performance.
- Categories such as Phones and Machines contributed significantly to profit.

Recommendations

- Improve sales performance in the South region.
- Focus on high-profit product categories.
- Strengthen customer retention strategies.
- Monitor discounts to maintain healthy profit margins.

Conclusion

The business is performing well with 2.26 million in sales, 442.22 thousand in profit, and a 19.55% profit margin. While some regions and months require improvement, the company shows positive overall growth and strong business potential.
